

Hegrecat TEDA

General Description

Hegrecat TEDA is high-purity triethylenediamine. It is a very strong polyurethane catalyst that can be used in a variety of polyurethane applications.

Advantages

Strong gelation catalyst

Widely applicable

Applications

Hegrecat TEDA is used in all types of polyurethane foams including flexible slabstock, flexible molded, rigid, semi-flexible and elastomeric. It is also used in polyurethane coatings applications. Hegrecat TEDA catalyst accelerates the reactions between the isocyanate and water, as well as between the isocyanate and organic hydroxyl groups.

Typical Physical Properties

Appearance	White Crystal
Content %	≥99.0
Water%	≤1.0
Relative density	1.14(water=1)
Melting point(°C)	158
Boiling point(°C)	174
Flash point(°C)	62.22

Storage and package Information

HeJia Chemicals recommends that our catalysts be stored in a dry and cool area under appropriate ventilation conditions. Each container should be closed tightly to avoid contamination with moisture or other negative influences, which could change the products' performance in the end use. The optimum storage temperature is between 10°C and 30°C. Lower and higher storage temperatures are not preferable and should be avoided.

25kgs per drum.
